CLYSTERUM

FINANCAL FREEDOM ON HEALTH SERVICE

WHITE PAPER 1.0

CLYSTERUM

FINANCAL FREEDOM ON HEALTH SERVICE
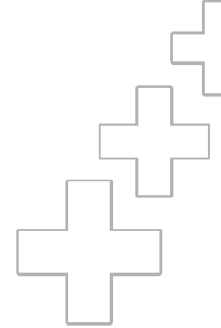

CONTENTS

1.CLYSTERUM INTRODUCTION

As all you know that blockchain technology become widespread day by day. Blockchain technology ensure unprecedented controlling opportunityon digital identity to individual users. Accordingly, blockchain which is a global open ledger uses not only crpytocurrencies production, also uses holding, managing and storingprocesses.

We seem to hear that 'Why CLYSTERUM while there are so many coins in crytocurrency sector?'

CLYSTERUM is a cryptocurrency and healthcare service project. As a cryptocurrency, CLYSTERUM form a usable platform to you to holding, using, managing and exploring cryptocurrency transactions. We recognize healthcare system deficiency in blockchain technology, improving day by day, for this reason we took an action to create CLYSTERUM Coin.

CLYSTERUM is a cryptocurrency to overcome the deficiencies of healthcare system.

CLYSTERUM team, take as a mission that always be open to new ideas and partnerships between users and healthcare providers. One of our basis goal is accepted the CLYSTERUM Coin as a payment methood in healthcare service expendings (Hospital, Pharmacy, Optical, Medical).
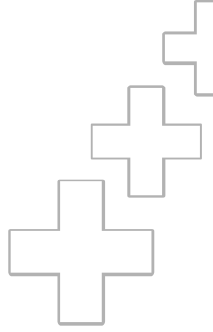

Our team aims to create a donation pool with nongovernmental organizations and ensure opportunities within social responsibility project to needers.

We think that for all these purposes and reasons, CLYSTERUM Coin is a necessity.

2. PURPOSE

CLYSTERUM token uses AVAX network. CLYSTERUM is not only token, also develop own virtual card and mobile application.

Payment of all electronical equipments and medical products received by hospitals can be made through the CLYSTERUM virtual card and 3% of the taxes deducted from payments made in this way will be transferred to the donation pool.

Payment of all logistic expenses of medicines and costs in the treatment of the patients can be made through CLYSTERUM virtual wallet. Therefore, 3% of the taxes deducted from payments made in this way will be transferred to the donation pool.

5.000.000.000 (five billion) tokens intended for CLYSTERUM will be produced. In order to collect donations, donations from corporate companies and individuals will be accepted and they will be given a NON-FUNGIBLE TOKEN (NFT) PLATINIUM plaque.
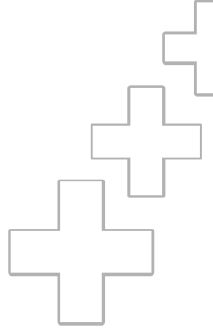

In fatal diseases (SMA, AIDS, cancer) the medication and treatment costs of patients determined by nongovernmental organizations (NGOS) will be given as payment to the hospital determined by us with the CLYSTERUM card, and the amount to be paid will be determined by NGOS and feedback will be provided to us. We are preparing a blog for doctors. Thanks to this blog, doctors will be able to exchange information with their collegues and write their articles here. Clysterum users will have access to the articles written and will have the opportunity to follow the doctors more closely.

2.1 CORPORATE GOALS

✚ To realize the project by cooperating with healthcare organizations such as hospitals, pharmacies, clinics, medical centers, veterinarians.

✚ To constitute relief fund with NGOS to reach needy.

✚ To constitute own blockchain system and hide and store health sector datas in here.

✚ To follow faster and solution-oriented ways by strengthening the current changes in the health sector with the blockchain system with the technological methods of our era.

✚ To be a pioneer in scientific research using blockchain technology.

✚ To develop projects that will facilitate the work life of health workers and to develop positive practices.

✚ Identification of needs and elimination of problems taking into account user opinions and suggestions.

✚ To carry out service we provide systematically, planned, timely with a minimum of errors.

✚ To increase the quality of service and meet the demands with measurement and evaluation system.

2.2 BLOCKHAIN SYSTEM

In recent years, the blockchain system has been developed in different ways. It is mainly focused on improving the application speed and transmission of multiple networks. The content stored in the blocks of the blockchain, as well as the activities performed by different participants in the blockchain network, can be controlled depending on how the blockchain is configured. Such blockchains are created in such a way as to issue special permissions to each participant. This gives participants the ability to perform certain functions, such as reading, accessing information, and writing information. Some of the biggest problems of the health sector are the introduction of counterfeit medicines and incomplete supervision of drug-based medicines. In order to solve these problems, it is necessary to verify and control the production of medicines from the time they reach the patient. With the help of blockchain technology, verification and auditing can be carried out in a systematic way. Thanks to the blockchain technology, the identity of the medicines coming out of the factory can be verified and time stamped at each delivery point. Therefore, the identity of the medicine can be verified and audited from the production stage to distribution. For these reasons, we will build a blockchain.

3. MOBILE APPLICATION

With our CLYSTERUM mobile application, we will bring you together with a huge health service. Features of CLYSTERUM mobile application:

➕ Donation Pool

With the help of donation pool,a share will be given for needy individuals.

➕ Aboiler (Walk and Earn)

You will be able to earn 5 CLYSTERUM tokens by taking 10,000 steps daily.

➕ The periodic table of medicines

For our users who cannot track their medicine use, you will not forget whether you are using your medicine with the reminder service and the marking option.
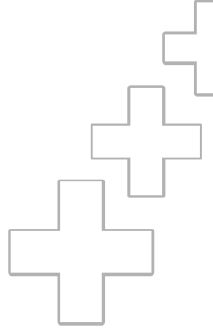

+ Self-Care

Many diseases that require emergency and early detection will be shared with you along with photos and content prepared by expert doctors.

+ Living with Cancer

We want to increase your awareness of cancer by researching all kinds of information that may be needed in the process of cancer disease diagnosis and treatment from accurate and scientific sources.

+ Expert Psychologist Support

Thanks to our mobile application, our users will be able to receive expert psychologist support. According to the preferences of our users, sessions with expert psychologists can be conducted by video or audio.

+ My Hospital

We have united the best hospitals in the field and the best serving doctors in the branch under one roof. Thanks to this feature, we offer you which hospitals the doctors who are good in their field work in.

+ Oral and Dental Health

Our users who have dental problems will be able to communicate their problems visually and in writing to our dentists who provide services through live support. Thanks to this service, our users who request support will have the opportunity to take the necessary measures after a virtual examination.

4. CLYSTERUM VIRTUAL CARD

Thanks to the virtual card we are developing, you will be able to have many advantages. The advantages that can be had thanks to this card are listed below.

CLYSTERUM offers the opportunity to pay all your expenses with a single card in thousands of medical institutions with virtual card agreement.

In addition the the possibility of profitable spending with your CLYSTERUM card you will aslo have the opportunity to stake.

Thanks to the refund feature of your CLYSTERUM card, you will also be able to have many advantages over the expenses you will make in the contracted places.

If the examination and treatment fees in hospitals are paid with a CLYSTERUM virtual card, a certain amount of this payment will be transferred to the user's wallet.

CLYSTERUM virtual card is a service that allows its users to easily make payments and provides operational convenience without the need to carry a physical card.
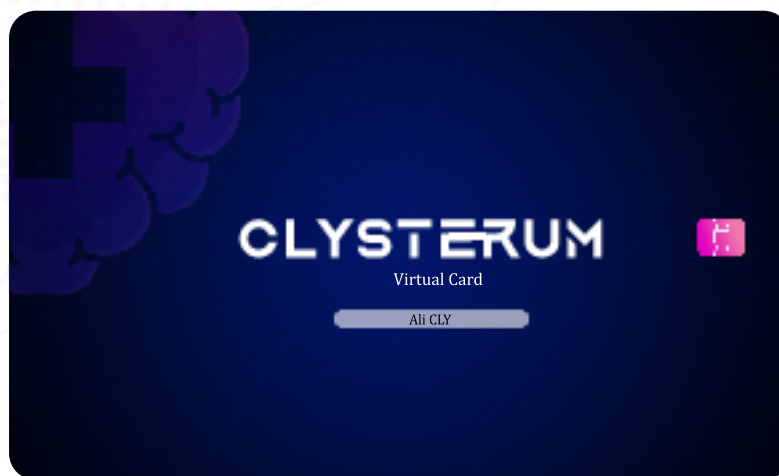

5. DONATION POOL

According to the amount of assistance provided by users and companies, the costs of treating fatal diseases such as SMA, AIDS, cancer will be covered from the aid pool fund. The treatment expenses to be covered from the relief fund will be determined by NGOS.

A certain amount of the fund accumulated in the donation pool will be allocated to countries in need of assistance, primarily in Africa continent, which have difficulty accessing basic health services. We aim to solve the basic health problems of people with the funds accumulated in the donation pool, as well as solve the health problems of animals.

In line with the goals and objectives mentioned above, we aim to use a significant part of the dona-, tion pool in the health of individuals as well as the health of our animal friends.
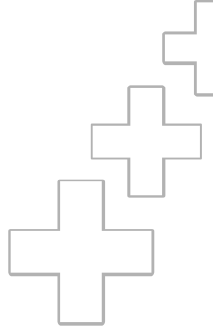

We believe that we can build a healthier world by increasing social health awareness in line with the goals and projects we have set by acting with the awareness that this planet we live on does not belong only to us humans.

6. AIRDROP

We will distribute the Clysterum Coin via airdrop to our valued users in accordance with our vision. With this airdrop distribution, we aim to both reach a specific audience and provide new opportunities to our participants. In this way, we offer a certain part of our advertising budget to our valued-users. During the airdrop, each user is entitled to 5 CLY Coins through the mobile application by making up to 10.000 real steps per day. Our valuable users will be given a virtual steps when our users invite a somebody for a healthier life.

Process of the invitation system;

Each inviting user will be given 16.000 virtual steps.

16.000 Virtual Steps = 8.000 Real Steps

The CLY Coin equivalent of this is 4 coins.

WHAT IS CLYSTERUM VIRTUAL STEP?

We are pleased to introduce you to the new modeling of airdrop, which is distributed in accordance with the project vision that you deserve for 10.000 steps, and its new name is virtual step. A virtual step is a virtual version of the calories that a person spends on his body mass index without moving in real life. This version is the merit given as a result of the calculation of the effort that a person makes for the reference system based on the time spent in the virtual world.

A virtual step is the amount of steps given to you as a result of inviting someone.

The virtual steps will be calculated 50% less than the real step.

For example, the 1000 V.S. will be equivalent 500 R.S.
